SKILLS

- **Languages:** Typescript, Python, Java, C, SQL, HTML, CSS, Javascript, Bash
- **Frameworks:** React, NextJS, NodeJS, Express, Spring Boot, Flask, TailwindCSS, Jest, Puppeteer, LangChain, AI SDK
- **Tools:** AWS, Cloudflare, Terraform, Git, Docker, Postman, PostgreSQL, MongoDB, Vercel, Posthog, Sentry, GraphQL

EXPERIENCE

Software Engineer Intern - *Borderpass*

May 2025 - Aug 2026

- Architected an end-to-end AI Job Search Tool which generates filters based on vector indexed user resumes to perform a web crawl of popular job sites, returning a personalized list of job postings in seconds.
- Orchestrated and maintained critical cloud resources such as AWS Lambda functions and AWS Fargate background workers powering the core platform including PDF/ZIP merging/compression, image preprocessing, web scraping, and legal document generation significantly boosting system reliability and workflow efficiency.
- Developed and deployed headless browser agents on ECS for automating complex web tasks, resulting in hundreds of hours saved for the operations team weekly and boosting monthly application volume by 2.8x.
- Harnessed cutting-edge AI vision models like Google Gemini to intelligently extract and validate data from user documents, assembling a real-time profile of each applicant and capturing in PostgreSQL / Redshift.

Full Stack Developer Intern - *FPT Software*

Aug 2024 - Dec 2024

- Introduced a secure Node.js reverse proxy with encryption, JWT management, and session caching, which strengthened security by preventing client applications from directly interacting with the core API server
- Automated a key client workflow by developing a PDF parsing/autofilling tool using Apache PDFBox supporting raw and XFA-based PDFs. Integrated with an email webhook, ingesting thousands of forms daily
- Built a scalable Java Spring Boot email notification service that processed thousands of inbound and outbound emails daily, enabling reliable automated communication triggered by real-time application events.

UI/UX Design Intern - *Ministry of Transportation Ontario*

Jan 2024 - Apr 2024

- Accelerated product delivery by translating complex policy and technical requirements into high-fidelity Figma wireframes, supporting two agile engineering teams and improving sprint output and feature clarity.

EDUCATION

University of Toronto Scarborough - Toronto, ON

2022 - Jan 2027 Expected Graduation Date

- BSc. Computer Science, Entrepreneurship Specialist, 4th year

Current GPA: 3.85

PROJECTS / CONTRIBUTIONS

Horus MCP - *Signal Scanning & Stock Market Research MCP Server*

[Source code](#) Jul 2026

- Built an MCP server in Python that exposes agentic trading tools to LLM agents including technical signal scans, scheduled background jobs, chart generation, and data ingestion from Yahoo Finance with TTL cache
- Architected a multi-tenant SaaS around the MCP using a dual-container Google Cloud Run backend (Bun API gateway + Python FastMCP sidecar over streamable HTTP) turning a local-based tool into a hosted product

Apache Superset - *Open Source Contribution*

[Source code](#) Jun 2026

- Contributed a critical dependency upgrade to resolve deprecated ORM runtime validation logic in Flask (Python)

Course Matrix - *AI Integrated Timetable Builder*

[Source code](#) Apr 2025

- Delivered a retrieval-augmented agentic chatbot using OpenAI API, LangChain, Vercel AI SDK, PostgreSQL and Pinecone vector search to answer UTSC course and timetable queries with context rich responses.
- Implemented an end-to-end ChatGPT-like UX with React complete with persistent conversation storage, multiple conversation threads, markdown rendering, and text streaming creating an intuitive conversational workflow.
