SKILLS

- **Languages:** Typescript, Python, Java, SQL, HTML, CSS, Javascript, Bash
- **Frameworks:** React, NextJS, NodeJS, Express, Spring Boot, Flask, TailwindCSS, Jest, BullMQ, LangChain, AI SDK
- **Tools:** AWS, Cloudflare, Terraform, Git, Docker, Postman, PostgreSQL, MongoDB, Vercel, REST APIs, GraphQL

EXPERIENCE

Software Engineer Intern - *Borderpass* *May 2025 - Aug 2026*

- Served 50,000+ users and partnered directly with in-house lawyers / legal operations teams to build robust legaltech software, using AWS (ECS, Lambdas, DynamoDB), NodeJS, NextJS, PostgreSQL, and GraphQL
- Scaled monthly application volume by 280% by developing Puppeteer browser agents on ECS for automating complex web tasks, resulting in 100's of hours saved for the legal & operations teams weekly.
- Architected an end-to-end AI Job Search Tool which generates filters based on vector indexed user resumes and performs a web crawl of popular job sites, returning a personalized list of job postings in seconds.
- Reduced document parsing spend by 36% by migrating AI document/image parsing system to Google Gemini which accurately parsed 2k+ user documents daily, assembling a real-time profile of each applicant.

Full Stack Developer Intern - *FPT Software* *Aug 2024 - Dec 2024*

- Automated high-volume legal and administrative workflows by developing a specialized PDF parsing and autofilling tool using Apache PDFBox supporting raw and XFA-based forms.
- Built a scalable Java Spring Boot email notification service that processed thousands of inbound and outbound communications daily, ensuring reliable automated updates triggered by time-sensitive client application events.
- Introduced a secure Node.js reverse proxy with encryption, JWT management, and session caching, which strengthened security by preventing client applications from directly interacting with the core API server

UI/UX Design Intern - *Ministry of Transportation Ontario* *Jan 2024 - Apr 2024*

- Accelerated product delivery by translating complex policy and technical requirements into high-fidelity Figma wireframes, supporting two agile engineering teams and improving sprint output and feature clarity.

EDUCATION

University of Toronto Scarborough - *Toronto, ON* *2022 - Jun 2027 Expected Graduation Date*

- BSc. Computer Science, Entrepreneurship Specialist, 4th year Current GPA: 3.84

PROJECTS / CONTRIBUTIONS

Horus MCP - *Signal Scanning & Stock Market Research MCP Server* Live Demo Source code *Jul 2026*

- Built an MCP server in Python that exposes agentic trading tools to LLM agents including technical signal scans, scheduled background jobs, chart generation, and data ingestion from Yahoo Finance with TTL cache
- Architected a multi-tenant SaaS around the MCP using a dual-container Google Cloud Run backend (Bun API gateway + Python FastMCP sidecar over streamable HTTP) used by over 260 users

Apache Superset - *Open Source Contribution* Source code *Jun 2026*

- Contributed a critical dependency upgrade to resolve deprecated ORM runtime validation logic in Flask (Python)

Course Matrix - *AI Integrated Timetable Builder* Source code *Apr 2025*

- Delivered a retrieval-augmented agentic chatbot using OpenAI API, LangChain, Vercel AI SDK, PostgreSQL (Supabase) and Pinecone vector search to answer university course and timetable queries, used by 400+ students
- Implemented an end-to-end ChatGPT-like UX with React complete with persistent conversation storage, multiple conversation threads, markdown rendering, and text streaming creating an intuitive conversational workflow.
